1.6 Key Words
1.7 Some Useful Books
1.8 Answers to Check Your Progress Exercises

1.0 OBJECTIVES

In this unit we shall focus on the nature, scope and utility of a comparative study of politics. Through these you will be able to look for answers to questions like, (a) what is the nature of comparative politics i.e., what is it that gives comparative political analysis its specificity: its characteristics, elements, constituents, perspective, purpose/aims, and the ideological/structural/contextual framework within which these are realised, (b) what constitutes its scope i.e., the range, field, or area of activity that it encompasses and, (c) its utility i.e., its usefulness and relevance for enhancing our understanding of political reality, or how does comparative study help us understand this reality better. It should be pointed out, however, that these aspects cannot be studied in isolation of each other in a compartmentalised form. For a proper understanding of the nature, scope and utility of a comparative study of politics, one has to look at the latter's development historically and see how its attributes evolved with changing contexts and concerns.

The unit is divided into different sections which take up in some detail the above outlined themes. Each section is followed by questions based on the section. Towards the end of the unit is provided a list of readings which can be used to supplement this unit. A set of questions follow the readings which will help you assess your understanding. All terms which have specific meanings in comparative political analysis have been explained in the section on keywords.

1.1 INTRODUCTION

As the term itself points out, comparative politics is about comparing political phenomena. The emphasis is on both the method of inquiry i.e., comparative, and the substance into which inquiry is directed i.e., political phenomena. As will be pointed out in Unit 2 Comparative Method and Methods of Comparison, the comparative method is not the sole prerogative of comparative politics, and is
Comparative Methods and Approaches
used with equal ease in other disciplines as well e.g., Psychology and Sociology.
It is the substance of comparative politics i.e., its subject matter, vocabulary and perspective, which gives comparative politics its distinctiveness both as a method and as a specific field of study.

The nature and scope of comparative politics has been determined historically by changes in the above mentioned features i.e., (a) subject matter (b) vocabulary and (c) political perspective. To understand where, why and how these changes took place we have to look at what is the focus of study at a particular historical period, what are the tools, languages or concepts being used for the study and what is the vantage point, perspective and purpose of enquiry. Thus in the sections which follow, we shall look at the manner in which comparative politics has evolved, the continuities and discontinuities which have informed this evolution, the ways in which this evolution has been determined in and by the specific historical contexts and socio-economic and political forces, and how in the context of late twentieth century viz, globalisation, radical changes have been brought about in the manner in which the field of comparative politics has so far been envisaged.

1.2 COMPARATIVE STUDY OF POLITICS: NATURE AND SCOPE

We mentioned in the previous section that the comparative method is commonly used in other disciplines as well. We also know from the earlier section, that comparative politics is distinguished from other disciplines which also use the comparative method, by its specific subject matter, language and perspective. In that case, we might well ask the question, is there at all a distinct field of comparative political analysis or is it a sub-discipline subsumed within the larger discipline of Political Science. The three aspects of subject matter, language, vocabulary, and perspective, we must remember, are inadequate in establishing the distinctiveness of comparative politics within the broad discipline of Political Science, largely because comparative politics shares the subject matter and concerns of Political Science, i.e. democracy, constitutions, political parties, social movements etc. Within the discipline of Political Science thus the specificity of comparative political analysis is marked out by its conscious use of the comparative method to answer questions which might be of general interest to political scientists.

1.2.1 Comparisons: Identification of Relationships

This stress on the comparative method as defining the character and scope of comparative political analysis has been maintained by some scholars in order to dispel frequent misconceptions about comparative politics as involving the study of ‘foreign countries’ i.e., countries other than your own. Under such an understanding, if you were studying a country other than your own, (e.g., an American studying the politics of Brazil or an Indian studying that of Sri Lanka) you would be called a comparativist. More often than not, this misconception implies merely the gathering of information about individual countries with little or at the most implicit comparison involved. The distinctiveness of comparative politics, most comparativists would argue, lies in a conscious and systematic use of comparisons to study two or more countries with the purpose of identifying, and eventually explaining differences or similarities between them with respect to the particular phenomena being analysed. For a long time comparative politics appeared merely to look for similarities and differences, and directed this towards classifying, dichotomising or polarising political phenomena. Comparative political analysis is however, not simply about identifying similarities and differences. The
purpose of using comparisons, it is felt by several scholars, is going beyond ‘identifying similarities and differences’ or the ‘compare and contrast approach’, to ultimately study political phenomena in a larger framework of relationships. This, it is felt, would help deepen our understanding and broaden the levels of answering and explaining political phenomena. (See Manoranjan Mohanty, ‘Comparative Political Theory and Third World Sensitivity’, Teaching Politics, Nos.1 & 2, 1975).

1.2.2 Comparative Politics and Comparative Government

The often encountered notion that comparative politics involves a study of governments arises, asserts Ronald Chilcote, from ‘conceptual confusion’. Unlike comparative government whose field is limited to comparative study of governments, comparative politics is concerned with the study of all forms of political activity, governmental as well as nongovernmental. The field of comparative politics has an ‘all encompassing’ nature and comparative politics specialists tend to view it as the study of everything political. Any lesser conception of comparative politics would obscure the criteria for the selection and exclusion of what may be studied under this field. (Ronald Chilcote, Introduction, Theories of Comparative Politics, p.4)

It may, however, be pointed out that for long comparative politics concerned itself with the study of governments and regime types, and confined itself to studying western countries. The process of decolonisation especially in the wake of the second World War, generated interest in the study of ‘new nations’. The increase in numbers and diversity of units/cases that could be brought into the gamut of comparison, was accompanied also by the urge to formulate abstract universal models, which could explain political phenomena and processes in all the units. Simultaneous to the increase and diversification of cases to be studied was also an expansion in the sphere of politics so as to allow the examination of politics as a total system, including not merely the state and its institutions but also individuals, social groupings, political parties, interest groups, social movements etc. Certain aspects of institutions and political process were especially in focus for what was seen as their usefulness in explaining political processes, e.g., political socialisation, patterns of political culture, techniques of interest articulation and interest aggregation, styles of political recruitment, extent of political efficacy and political apathy, ruling elites etc. These systemic studies were often built around the concern with nation-building i.e., providing a politico-cultural identity to a population, state-building i.e., providing institutional structure and processes for politics and modernisation i.e., to initiate a process of change along the western path of development. The presence of divergent ideological poles in world politics (Western capitalism and Soviet socialism), the rejection of western imperialism by most newly liberated countries, the concern with maintaining their distinct identity in the form of the non-aligned movement and the sympathy among most countries with a socialist path of development, gradually led to the irrelevance of most modernisation models for purposes of global/large level comparisons. Whereas the fifties and sixties were the period where attempts to explain political reality were made through the construction of large scale models, the seventies saw the assertion of Third World-ism and the rolling back of these models. The Eighties saw the constriction of the levels of comparison with studies based on regions or smaller numbers of units became prevalent. With globalisation, however, the imperatives for large level comparisons increased and the field of comparisons has diversified with the proliferation of non-state, non-governamental actors and the increased interconnections between nations with economic linkages and information technology revolution.
In the section which follows we shall take up these developments in comparative political analysis, emphasising in each case, the changes in the character and field of enquiry.

1.3 COMPARATIVE POLITICS: A HISTORICAL OVERVIEW

The nature and scope of comparative politics has varied according to the changes which have occurred historically in its subject matter. The subject matter of comparative politics has been determined both by the geographical space (i.e. countries, regions) which has constituted its field as well as the dominant ideas concerning social reality and change which shaped the approaches to comparative studies (capitalist, socialist, mixed and indigenous). Likewise, at different historical junctures the thrust or the primary concern of the studies kept changing.

1.3.1 The Origins of Comparative Study of Politics

In its earliest incarnation, the comparative study of politics comes to us in the form of studies done by the Greek philosopher Aristotle. Aristotle studied the constitutions of 150 states and classified them into a typology of regimes. His classification was presented in terms of both descriptive and normative categories i.e., he not only described and classified regimes and political systems in terms of their types e.g., democracy, aristocracy, monarchy etc., he also distinguished them on the basis of certain norms of good governance. On the basis of this comparison he divided regimes into good and bad - ideal and perverted. These Aristotelian categories were acknowledged and taken up by Romans such as Polybius (201-120 B.C.) and Cicero (106-43 B.C.) who considered them in formal and legalistic terms. Concern with comparative study of regime types reappeared in the 15th century with Machiavelli (1469-1527).

1.3.2 The Late Nineteenth and Early Twentieth Centuries

The preoccupation with philosophical and speculative questions concerning the ‘good order’ or the ‘ideal state’ and the use, in the process, of abstract and normative vocabulary, persisted in comparative studies of the late nineteenth and early twentieth centuries. The late nineteenth and early twentieth centuries signified the period when liberalism was the reigning ideology and European countries enjoyed dominance in world politics. The ‘rest of the world’ of Asia, Africa and Latin America were either European colonies or under their sphere of influence as ex-colonies. Comparative studies during this period (James Bryce’s Modern Democracies (1921), Herman Finer’s Theory and Practice of Modern Governments (1932) and Carl J. Friedrich’s Constitutional Government and Democracy (1937), Roberto Michels, Political Parties (1915) and M.Duverger, Political Parties (1950)) were largely concerned with a comparative study of institutions, the distribution of power, and the relationship between the different layers of government. These studies were eurocentric i.e., confined to the study of institutions, governments and regime types in European countries like Britain, France and Germany. It may thus be said that these studies were in fact not genuinely comparative in the sense that they excluded from their analysis a large number of countries. Any generalisation derived from a study confined to a few countries could not legitimately claim having validity for the rest of the world. It may be emphasised here that exclusion of the rest of the world was symptomatic of the dominance of Europe in world politics - a dominance - which however, was on the wane, and shifting gradually to North America. All contemporary history had Europe at its centre, obliterating the rest of the world (colonised or liberated from colonisation) (a) as ‘people without histories’ or (b) whose histories
were bound with and destined to follow the trajectories already followed by the advanced countries of the West. Thus the above mentioned works manifest their rootedness in the normative values of western liberal democracies which carried with it the baggage of racial and civilisational superiority, and assumed a prescriptive character for the colonies/former colonies.

1.3.3 The Second World War and After

In the nineteen thirties the political and economic situation of the world changed. The Bolshevik Revolution in Russia in 1917, brought into world politics, Socialism, as an ideology of the oppressed and, as a critical alternative to western liberalism and capitalism. With the end of the second World War a number of significant developments had taken place, including the waning of European (British) hegemony, the emergence and entrenchment of United States of America as the new hegemon in world politics and economy, and the bifurcation of the world into two ideological camps viz. (western) capitalism and (eastern) socialism. The majority of the ‘rest of the world’ had, by the time the second World War ended, liberated itself from European imperialism. For a period after decolonisation the notions of development, modernisation, nation-building, state-building etc., evinced a degree of legitimacy and even popularity as ‘national slogans’ among the political elite of the ‘new nations’. Ideologically, however, these ‘new nations’, were no longer compelled to tow the western capitalist path of development.

While socialism had its share of sympathisers among the new ruling elite of the Asia, America and Latin America, quite a number of newly independent countries made a conscious decision to distance themselves from both the power blocs, remaining non-aligned to either. A number of them evolved their own specific path of development akin to the socialist, as in the case of Ujama in Tanzania, and the mixed-economy model in India which was a blend of both capitalism and socialism.

It may be worth remembering that the comparative study of governments till the 1940s was predominantly the study of institutions, the legal-constitutional principles regulating them, and the manner in which they functioned in western (European) liberal-democracies. In the context of the above stated developments, a powerful critique of the institutional approach emerged in the middle of 1950s. The critique had its roots in behaviourism which had emerged as a new movement in the discipline of politics aiming to provide scientific rigour to the discipline and develop a science of politics. Known as the behavioural movement, it was concerned with developing an enquiry which was quantitative, based on survey techniques involving the examination of empirical facts separated from values, to provide value-neutral, non-prescriptive, objective observations and explanations. The behaviourists attempted to study social reality by seeking answers to questions like ‘why people behave politically as they do, and why as a result, political processes and systems function as they do’. It is these ‘why questions’ regarding differences in people’s behaviours and their implications for political processes and political systems, which changed the focus of comparative study from the legal-formal aspects of institutions. Thus in 1955 Roy Macridis criticised the existing comparative studies for privileging formal institutions over non-formal political processes, for being descriptive rather than analytical, and case-study oriented rather than genuinely comparative. (Roy Macridis, The Study of Comparative Government, New York, Random House, 1955). Harry Eckstein points out that the changes in the nature and scope of comparative politics in this period show a sensitivity to the changing world politics urging the need to reconceptualise the notion of politics and develop paradigms for large-scale comparisons. (Harry Eckstein, ‘A Perspective on Comparative Politics, Past and Present’ in Harry Eckstein and David Apter eds., Comparative Politics: A Reader, New York, Free Press, 1963.) Rejecting the then traditional
Comparative Methods and Approaches

and almost exclusive emphasis on the western world and the conceptual language which had been developed with such limited comparisons in mind, Gabriel Almond and his colleagues of the American Social Science Research Council's Committee on Comparative Politics (founded in 1954) sought to develop a theory and a methodology which could encompass and compare political systems of all kinds - primitive or advanced, democratic or non-democratic, western or non-western.

The broadening of concerns in a geographic or territorial sense was also accompanied by a broadening of the sense of politics itself, and in particular, by a rejection of what was then perceived as the traditional and narrowly defined emphasis on the study of formal political institutions. The notion of politics was broadened by the emphasis on 'realism' or politics 'in practice' as distinguished from mere 'legalism'. This included in its scope the functioning of less formally structured agencies, behaviours and processes e.g. political parties, interest groups, elections, voting behaviour, attitudes etc. (Gabriel Almond, Political Development, Boston, 1970). With the deflection of attention from studies of formal institutions, there was simultaneously a decline in the centrality of the notion of the state itself. We had mentioned earlier that the emergence of a large number of countries on the world scene necessitated the development of frameworks which would facilitate comparisons on a large scale. This led to the emergence of inclusive and abstract notions like the political system. This notion of the 'system' replaced the notion of the state and enabled scholars to take into account the 'extra-legal', 'social' and 'cultural' institutions which were crucial to the understanding of non-western politics and had the added advantage of including in its scope 'pre-state'/non-state' societies as well as roles and offices which were not seen as overtly connected with the state. Also, with the change of emphasis to actual practices and functions of institutions, the problems of research came to be defined not in terms of what legal powers these institutions had, but what they actually did, how they were related to one another, and what roles they played in the making and execution of public policy. This led to the emergence of structural-functionalism, in which certain functions were described as being necessary to all societies, and the execution and performance of these functions were then compared across a variety of different formal and informal structures. (Peter Mair, 'Comparative Politics: An Overview', p.315)

While the universal frameworks of systems and structures-functions enabled western scholars to study a wide range of political systems, structures, and behaviours, within a single paradigm, the appearance of 'new nations' provided to western comparativists an opportunity to study what they perceived as economic and political change. Wiarda points out that it was in this period of the sixties that most contemporary scholars of comparative politics came of age. The 'new nations' became for most of these scholars [ironically] 'living laboratories' for the study of social and political change. Wiarda describes those 'exciting times' which offered unique opportunities to study political change, and saw the development of new methodologies and approaches to study them. It was during this period that some of the most innovative and exciting theoretical and conceptual approaches were advanced in the field of comparative politics: study of political culture, political socialisation, developmentalism, dependency and interdependency, corporatism, bureaucratic-authoritarianism and later transitions to democracy etc. (Howard J.Wiarda, 'Is Comparative Politics Dead? Rethinking the Field in the Post-Cold War Era', Third World Quarterly, Vol.19, no.5.)

This period saw the mushrooming of universalistic models like Easton's political system, Deutsch's social mobilisation and Shil's centre and periphery. The theories of modernisation by Apter, Rokkan, Eisenstadt and Ward and the theory of political development by Almond, Coleman, Pye and Verba also claimed...
universal relevance. These theories were claimed to be applicable across cultural and ideological boundaries and to explain political process everywhere. The development of comparative political analysis in this phase coincided with the international involvement of the United States through military alliances and foreign aid. Most research in this period was not only funded by research foundations, it was also geared to the goals of US foreign policy. The most symbolic of these were the Project Camelot in Latin America and the Himalayan Project in India. This period was heralded by the appearance of works like Apter’s study on Ghana. Published in 1960, *Politics of Developing Areas* by Almond and Coleman, sharply defined the character of the new ‘Comparative Politics Movement’. The publication of a new journal in the US entitled *Comparative Politics* in 1969 reflected the height of this trend. (Manoranjan Mohanty, ‘Comparative Politics and Third World Sensitivity’, *Teaching Politics*, Nos., 1 & 2, 1975). ‘Developmentalism’ was perhaps the dominant conceptual paradigm of this time. To a considerable extent, the interest in developmentalism emanated from US foreign policy interests in ‘developing’ countries, to counter the appeals of Marxism-Leninism and steer them towards a non-communist way to development. (Howard J. Wiarda, ‘Is Comparative Politics Dead? Rethinking the Field in the Post-Cold War Era’, *Third World Quarterly*, Vol.19, no.5, p.937)

### 1.3.4 The 1970s and Challenges to Developmentalism

Towards the 1970s, developmentalism came to be criticised for favouring abstract models, which flattened out differences among specific political/social/cultural systems, in order to study them within a single universalistic framework. These criticisms emphasised the ethnocentricism of these models and focussed on the Third World in order to work out a theory of underdevelopment. They stressed the need to concentrate on solutions to the backwardness of developing countries. Two main challenges to developmentalism which arose in the early 1970s and gained widespread attention were (a) dependency and (b) corporatism.

Dependency theory criticised the dominant model of developmentalism for ignoring (a) domestic class factors and (b) international market and power factors in development. It was particularly critical of US foreign policy and multinational corporations and suggested, contrary to what was held true in developmentalism, that the development of the already-industrialised nations and that of the developing ones could not go together. Instead, dependency theory argued, that the development of the West had come on the shoulders and at the cost of the non-West. The idea that the diffusion of capitalism promotes underdevelopment and not development in many parts of the world was embodied in Andre Gunder Frank’s *Capitalism and Underdevelopment in Latin America* (1967), Walter Rodney’s *How Europe Underdeveloped Africa* (1972) and Malcolm Caldwell’s *The Wealth of Some Nations* (1979). Marxist critics of the dependency theory, however, pointed out that the nature of exploitation through surplus extraction should not be seen simply on national lines but, as part of a more complex pattern of alliances between the metropolitan bourgeoisie of the core/centre and the indigenous bourgeoisie of the periphery/satellite as they operated in a worldwide capitalist system. The corporatist approach criticised developmentalism for its Euro-American ethnocentricism and indicated that there were alternative organic, corporatist, often authoritarian ways to organise the state and state-society relations. (Ronald Chilcote, *Theories of Comparative Politics*, p.16)

### 1.3.5 The 1980s: The Return of the State

During the later 1970s and into the 1980s, still reflecting the backlash against developmentalism, a number of theories and subject matters emerged into the field of comparative politics. These included bureaucratic-authoritarianism, indigenous concepts of change, transitions to democracy, the politics of *structural*
adjustment, neoliberalism and privatisation. While some scholars saw these developments as undermining and breaking the unity of the field which was being dominated by developmentalism, others saw them as adding healthy diversity, providing alternative approaches and covering new subject areas. Almond, who had argued in the late 1950s that the notion of the state should be replaced by the political system, which was adaptable to scientific inquiry, and Easton, who undertook to construct the parameters and concepts of a political system, continued to argue well into the 1980s on the importance of political system as the core of political study. The state, however, received its share of attention in the 60s and 70s in the works of Guillermo O'Donnell e.g., Economic Modernisation and Bureaucratic Authoritarianism (1973). Ralph Miliband’s The State in Capitalist Society (1969) had also kept the interest alive. With Nicos Poulantzas’s State, Power, Socialism (1978), and political sociologists Peter Evans, Theda Skocpol, and others Bringing the State Back In (1985), focus was sought to be restored onto the state.

1.3.6 The Late Twentieth Century: Globalisation and Emerging Trends/ Possibilities

a) Scaling down of systems: Much of the development of comparative political analysis in the period 1960s to 1980s can be seen as an ever widening range of countries being included as cases, with more variables being added to the models, such as policy, ideology, governing experience, and so on. With the 1980s, however, there has been a move away from general theory to emphasis on the relevance of context. In part, this tendency reflects the renewed influence of historical inquiry in the social sciences, and especially the emergence of a ‘historical sociology’ which tries to understand phenomena in the very broad or ‘holistic’ context within which they occur. (Theda Skocpol and M.Somers, ‘The Use of Comparative History in Macrosocial Inquiry’, Comparative Studies in Society and History, No.22, 1980 and P.Abrams, Historical Sociology, Ithaca, 1982). There has been a shying away from models to a more in-depth understanding of particular countries and cases where more qualitative and contextualised data can be assessed and where account can be taken of specific institutional circumstances or particular political cultures. Hence we see a new emphasis on more culturally specific studies (e.g., English speaking countries, Islamic countries), and nationally specific countries (e.g., England, India), and even institutionally specific countries (e.g., India under a specific regime). While emphasis on ‘grand systems’ and model building diminished, the stress on specific contexts and cultures has meant that the scale of comparisons was brought down. Comparisons at the level of ‘smaller systems’ or regions, however, remained e.g., the Islamic world, Latin American countries, Sub-Saharan Africa, South Asia etc.

b) Civil Society and Democratisation Approach(es): The disintegration of Soviet Union brought into currency the notion of the ‘end of history’. In his article ‘The End of History?’ (1989), which was developed later into the book The End of History and the Last Man (1992), Francis Fukuyama argued that the history of ideas had ended with the recognition and triumph of liberal democracy as the ‘final form of human government’. The ‘end of history’, invoked to stress the predominance of western liberal democracy, is in a way reminiscent of the ‘end of ideology’ debate of the 1950s which emerged at the height of the cold war and in the context of the decline of communism in the West. Western liberal scholars proposed that the economic advancement made in the industrialised societies of the west had resolved political problems, e.g., issues of freedom and state power, workers rights
etc., which are assumed to accompany industrialisation. The U.S. sociologist, Daniel Bell in particular, pointed in his work "The End of Ideology?: On the Exhaustion of Political Ideas in the 1950s, 1960), that in the light of this development there was an ideological consensus, or the suspension of a need for ideological differences over issues of political practice. In the nineteen eighties, the idea of the ‘end of history’ was coupled with another late nineteen eighties phenomenon - globalisation. Globalisation refers to a set of conditions, scientific, technological, economic and political, which have linked together the world in a manner so that occurrences in one part of the world are bound to affect or be affected by what is happening in another part. It may be pointed out that in this global world the focal point or the centre around which events move worldwide is still western capitalism. In the context of the so called triumph of capitalism, the approaches to the study of civil society and democratisation that have gained currency give importance to civil society defined in terms of protection of individual rights to enter the modern capitalist world.

There is, however, another significant trend in the approach which seeks to place questions of civil society and democratisation as its primary focus. If there are on one hand studies conforming to the contemporary interest of western capitalism seeking to develop market democracy, there are also a number of studies which take into account the resurgence of people’s movements seeking autonomy, right to indigenous culture, movements of tribals, dalits, lower castes, and the women’s movement and the environment movement. These movements reveal a terrain of contestation where the interests of capital are in conflict with peoples rights and represent the language of change and liberation in an era of global capital. Thus concerns with issues of identity, environment, ethnicity, gender, race, etc. have provided a new dimension to comparative political analysis. (See Manoranjan Mohanty, Contemporary Indian Political Theory, 2000).

c) Information collection and diffusion: A significant aspect and determinant of globalisation has been the unprecedented developments in the field of information and communication technology viz., the Internet and World Wide Web. This has made the production, collection and analysis of data easier and also assured their faster and wider diffusion, worldwide. These developments have not only enhanced the availability of data, but also made possible the emergence of new issues and themes which extend beyond the confines of the nation-state. These new themes in turn form an important/influential aspect of the political environment of the contemporary globalised world. The global network of social movements organisations, the global network of activists is one such significant aspect. The diffusion of ideas of democratisation is an important outcome of such networking. The Zapastista rebellion in the southern Mexican state of Chiapas used the Internet and the global media to communicate their struggle for rights, social justice and democracy. The concern with issues regarding the promotion and protection of human rights which is dependent on the collection and dissemination of information has similarly become pertinent in the contemporary world.

Note: i) Use the space given below for your answers.
   ii) Check your progress with the model answer given at the end of the unit.

1) Is it possible to say that comparative politics refers only to a method of studying governments?
2) The nature, field and scope of comparative politics has evolved in response to the changing socio-political concerns over different historical periods. Comment.

1.4 COMPARATIVE STUDY OF POLITICS: UTILITY

The question of utility of comparative politics is concerned with its usefulness and relevance for enhancing our understanding of political reality. It seeks to know how a comparative study helps us understand this reality better.

First and foremost, we must bear in mind that political behaviour is common to all human beings and manifests itself in diverse ways and under diverse social and institutional set ups all over the world. It may be said that an understanding of these related and at the same time different political behaviours and patterns is an integral part of our understanding of politics itself. A sound and comprehensive understanding would commonly take the form of comparisons.

1.4.1 Comparing for Theoretical Formulation

While comparisons form an implicit part of all our reasoning and thinking, most comparativists would argue that a comparative study of politics seeks to make comparisons consciously to arrive at conclusions which can be generalised i.e. held true for a number of cases. To be able to make such generalisations with a degree of confidence, it is not sufficient to just collect information about countries. The stress in comparative political analysis, is on theory-building and theory-testing with the countries acting as units or cases. A lot of emphasis is therefore laid, and energies spent, on developing rules and standards about how comparative research should be carried out. A comparative study ensures that all generalisations are based on the observation of more than one phenomenon or observation of relationship between several phenomena. The broader the observed universe, the greater is the confidence in statements about relationship and sounder the theories.

1.4.2 Comparisons for Scientific Rigour

As will be explained in the next unit, the comparative method gives these theories scientific basis and rigour. Social scientists who emphasise scientific precision, validity and reliability, see comparisons as indispensable in the social sciences because they offer the unique opportunity of 'control' in the study of social phenomena. (Giovanni Sartori, 'Compare, Why and How' in Mattei Dogan and Ali Kazancigil eds., Comparing Nations, Concepts, Strategies, Substance, Blackwell, Oxford, 1994.)
For a long time comparative politics appeared merely to look for similarities and differences, and directed this towards classifying, dichotomising or polarising political phenomena. Comparative political analysis is however, not simply about identifying similarities and differences. The purpose of using comparisons, it is felt by several scholars, is going beyond 'identifying similarities and differences' or the 'compare and contrast approach' as it is called, to ultimately study political phenomena in a larger framework of relationships. This, it is felt, would help deepen our understanding and broaden the levels of answering and explaining political phenomena. (See Manoranjan Mohanty, 'Comparative Political Theory and Third World Sensitivity', Teaching Politics, Nos.1 & 2, 1975)

1.5 SUMMING UP

The nature and scope of comparative study of politics related to its subject matter, its field of study, the vantage point from which the study is carried out and the purposes towards which the study is directed. These have, however, not been static and have changed over time. While the earliest studies concerned themselves with observing and classifying governments and regimes, comparative politics in the late nineteenth and early twentieth century was concerned with studying the formal legal structures of institutions in western countries. Towards the end of the second World War, a number of 'new nations' emerged on the world scene having liberated themselves from colonial domination. The dominance of liberalism was challenged by the emergence of communism and the powerful presence of Soviet Union on the world scene. The concern among comparativists changed at this juncture to studying the diversity of political,behaviours and processes which were thrown up, however, within a single overarching framework. The concept of ‘systems’ and ‘structures-functions’ came in vogue. These frameworks were used by western scholars particularly those in the United States to study phenomena like developmentalism, modernisation etc. While the political elite of the newly independent countries found concepts like development, nation-building and state building attractive, in many cases they evolved their own ideological stances and chose to remain non-aligned to either ideological blocs. In the late 1980s focus on studying politics comparatively within an overarching framework of ‘system’ declined and regional systemic studies assumed significance. The focus on state in these studies marked a resurgence of the study of power structures within civil society and its political forms, which had suffered a setback with the arrival of systems and structures-functions into comparative politics. The petering out of Soviet Union in the same period, provoked western scholars to proclaim the ‘end of history’ marking the triumph of liberalism and capitalism. Globalisation of capital, a significant feature of the late
nineteen eighties, which continues and makes itself manifest in technological, economic and information linkages among the countries of the world, has also tended to influence comparativists into adopting universalistic, homogenising expressions like 'transitions to democracy', the 'global market' and 'civil society'. Such expressions would have us believe that there do not in fact remain differences, uncertainties and contests which need to be explained in a comparative perspective. There is, however, another way to look at the phenomena and a number of scholars see the resurgence of civil society in terms of challenges to global capitalism which comes from popular movements and trade union activism throughout the world.

Check Your Progress 3

Note: i) Use the space given below for your answers.
   ii) Check your progress with the model answer given at the end of the unit.

1) What are the features that determine the nature and scope of comparative politics?

2) Trace the development of Comparative Politics in the twentieth century bringing out (a) the specificities of the period before and after the second World War; (b) developmentalism and its critique; (c) late twentieth century developments.

3) A comparative study of politics looks for explanations of political phenomenon in a framework of relationships. In the light of this statement comment on the developments in the field of comparative politics after the demise of colonial empires, through the cold war, unto the age of globalisation.

1.6 KEY WORDS

Behaviouralism: The belief that social theories should be constructed only on the basis of observable behaviour, providing quantifiable data for research.

Civil society: The term has contested meanings. By and large it is understood as the realm of autonomous groups and associations, a private sphere independent from public authority.
Configurative: Refers to a combination of favourable conditions or aspects of any observed political phenomenon, e.g., the necessary and sufficient conditions for revolution, democratic participation etc..

Control: A regulation or check — an important part of experiments where a parallel experiment or group of subjects is set up (control group) - to provide a standard of comparison for other experiment. In an experiment set up to study the effect of visual aids in learning, the control group will not be introduced with the condition (visual aid) whose influence is to be studied.

Democratisation: Refers to processes indicating the promotion of democracy, implying in particular, the granting of basic freedoms, increase in popular participation and electoral choices.

Descriptive: Statements giving empirical facts, delineating characteristics and attributes.

Dichotomy: Division into two strongly contrasted groups or classes.

Eurocentric: Refers to the bias and distortions which emerge from the application of European values, beliefs and theories, to other cultures and groups.

Globalisation: Globalisation refers to a set of conditions, scientific, technological, economic and political, which have linked together the world in a manner so that occurrences in one part of the world are bound to affect or be affected by what is happening in another part.

Method: Methods are ways of organising theories for application to data, also called 'conceptual schemes'. Types of method comparative (using more than one case), configurative (using a single case study) and historical (using time and sequence). Method is more about 'thinking about thinking'.

Methodology: The study of different methods of research, including the identification of research questions, the formulation of theories to explain certain events and political outcomes, and the development of research design.

Model: In simple terms an intellectual construct which simplifies reality in order to emphasise the recurrent, the constant and the typical, which it presents in the form of clusters of tracts or attributes. In other words, 'models' and 'types' are treated as synonyms.

Neoliberalism: An updated version of classical political economy, dedicated to market individualism and minimal statism.

Normative: The prescription of values and standards of conduct, dealing with questions pertaining to 'what should be' rather than 'what is'.

Postbehaviouralism: Refers to a period after 1970 and a methodology that accepts that observations and analysis of the political world are not free from certain theoretical and value biases, yet strives to make strong inferences through empirical analysis.

Privatisation: The transfer of state assets from the public to the private sector, reflecting a contraction of state responsibilities.

Systems theory: The theory that treats the political system as a self-regulating mechanism, responding to 'inputs' (demands and support) by issuing authoritative decisions or 'outputs' (policies).
Theory: a definitive and logical statement (or groups of statements) about how the world (or some key aspect of the world) 'works'. Known collectively as empirical theory (as opposed to normative theory), these statements make claims about relationships between variables that can be tested using systematic comparative analysis.

1.8 ANSWERS TO CHECK YOUR PROGRESS EXERCISES

Check Your Progress 1

1) No it is not merely a method of studying governments. It is also concerned with analysing issues concerning governance and formulation of abstract universal models which could explain political phenomena and processes in all Units. See sub-section 1.2.2 to elaborate.

2) The subject matter of comparative politics has been evolving and developing both in terms of geographical space as well as ideas and theories. It has therefore passed through significant developments and undergone important changes. For elaboration see sub-section 1.3.

Check Your Progress 2

1) Comparative Politics is useful for the building of theories, scientific analysis of issues and problems, explanation of phenomena etc.

Check Your Progress 3

1) See Section 1.5
2) See Section 1.3.6
3) Write your answer on the basis of overall assessment of Section 1.3.
